

# NYLI CBRE Global Infrastructure Fund<sup>†</sup>

## Formerly MainStay CBRE Global Infrastructure Fund

A: VCRAX | C: VCRCX | I: VCRIX | R6: VCRQX

All data as of 06/30/25

Investing across the global-listed, infrastructure universe

Seeks: Total return.

Morningstar Category: Infrastructure

Benchmark: FTSE Global Core Infrastructure 50/50 Index (Net)<sup>5</sup>

### Core infrastructure exposure

Invests in global companies that own and operate the infrastructure assets and services essential for economic growth and vitality.

### High conviction approach

Investment process seeks to add value through active stock selection and sector allocation driven by proprietary research.

### All-weather asset class

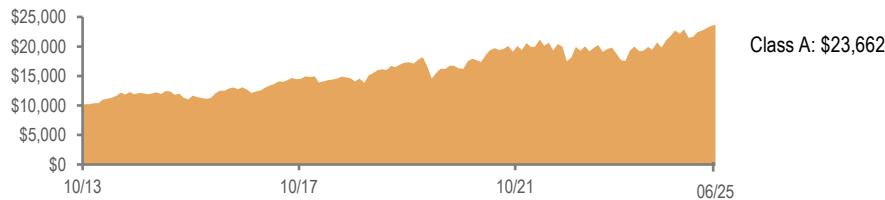

Infrastructure assets historically generated stable cash flows and exhibited low relative volatility compared with broad equities.

### Average Annual Total Returns<sup>1,2</sup> (%)

Returns represent past performance which is no guarantee of future results. Current performance may be lower or higher. Investment return and principal value will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Performance reflects a contractual fee waiver and/or expense limitation agreement in effect through 8/31/25, without which total returns may have been lower. This agreement renews automatically for one-year terms unless written notice is provided before the start of the next term or upon approval of the Board. No initial sales charge applies on investments of \$1 million or more (and certain other qualified purchases). However, a contingent deferred sales charge of 1.00% may be imposed on certain redemptions made within 18 months of the date of purchase on shares that were purchased without an initial sales charge. Visit [newyorklifeinvestments.com](http://newyorklifeinvestments.com) for the most recent month-end performance. Expenses stated are as of the fund's most recent prospectus.

<sup>†</sup>Effective 8/28/24, MainStay CBRE Global Infrastructure Fund was renamed NYLI CBRE Global Infrastructure Fund

The LSEG Lipper Fund Awards, granted annually, highlight funds and fund companies that have excelled in delivering consistently strong risk-adjusted performance relative to their peers. The LSEG Lipper Fund Awards are based on the Lipper Leader for Consistent Return rating, which is a risk-adjusted performance measure calculated over 36, 60 and 120 months. The fund with the highest Lipper Leader for Consistent Return (Effective Return) value in each eligible classification wins the LSEG Lipper Fund Award. The NYLI CBRE Global Infrastructure Fund (VCRIX) won the award in its category over 10 years from among 14 funds for the period ended 12/31/2024. ## Before You Invest

### Before considering an investment in the Fund, you should understand that you could lose money.

The investment strategies, practices and risk analyses used by the Subadvisor may not produce the desired results. Investments in infrastructure-related securities will expose the Fund to potential adverse economic, regulatory, political, legal and other changes affecting such investments. Issuers of securities in infrastructure-related businesses are subject to a variety of factors that may adversely affect their business or operations, including high interest costs in connection with capital construction programs, high leverage, costs associated with environmental or other regulations and the effects of economic slowdowns. MLPs carry many of the risks inherent in investing in a partnership. State law governing partnerships is often less restrictive than state law governing corporations. Accordingly, there may be fewer protections afforded investors in an MLP. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. The risks of investing in emerging markets include the risks of illiquidity, increased price volatility, smaller market capitalizations, less government regulation, less extensive and less frequent accounting, financial and other reporting requirements, risk of loss resulting from problems in share registration and custody, substantial economic and political disruptions, and the nationalization of foreign deposits or assets. Small and mid-cap stocks are often more volatile than large-cap stocks.

Because the Fund concentrates its investments in securities issued by companies principally engaged in the infrastructure group of industries, the Fund may be subject to greater risks and market fluctuations than a fund whose portfolio has exposure to a broader range of industries.

Portfolios concentrated in infrastructure securities and Master Limited Partnerships ("MLPs") may experience price volatility and other risks associated with non-diversification. Investment in infrastructure related companies may be subject to high interest costs in connection with capital construction programs, costs associated with environmental and other regulations, the effects of economic slowdown and surplus capacity, the effects of energy conservation policies, governmental regulation and other factors. MLPs often own interests Related to the oil and gas industries or other natural resources but may finance other projects. As such, MLPs will be negatively impacted by economic events adversely impacting that industry. Investments in MLPs may offer fewer legal protections than investments in corporations, and limited voting rights. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors, as well as increased volatility and lower trading volume. Other risks of the Fund include but are not limited to: Company; Convertible Securities; Currency; Derivative Instruments; Investment Model; Liquidity; Market; Market Capitalization; Other Investment Companies; and Securities Lending risks.

1. Average annual total returns include the change in share price and reinvestment of dividends and capital gain distributions. Class I shares are generally only available to corporate and institutional investors. Class R shares are available only through corporate-sponsored retirement plans. 2. The FTSE Global Core Infrastructure 50/50 Index (Net) captures the performance of listed infrastructure securities in both developed and emerging markets. Constituents are selected by further screening companies that derive revenues from infrastructure related activities within particular Industry Classification Benchmark (ICB) sub-sectors of the FTSE Global All Cap Index (Net). FTSE applies minimum infrastructure revenue thresholds of 65% for constituents of the Core Infrastructure indices. The index returns do not reflect deductions for fees or expenses. Index results assume the reinvestment of all capital gain and dividend distributions. An investment cannot be made directly into an index. 3. Standard deviation measures how widely dispersed a fund's returns have been over a specified period of time. A high standard deviation indicates that the range is wide, implying greater potential for volatility. Alpha measures a fund's risk-adjusted performance and is expressed as an annualized percentage. Beta is a measure of historical volatility relative to an appropriate index (benchmark) based on its investment objective. A beta greater than 1.00 indicates volatility greater than the benchmark's. R-Squared measures the percentage of a fund's movements that result from movements in the index. The Sharpe Ratio is calculated for the past 36-month period by dividing annualized excess returns by annualized standard deviation. The Annual Turnover Rate measures how quickly securities in the Fund are either bought or sold during the 12 months as of the most recent annual shareholder report. Information Ratio measures the returns above the returns of a benchmark to the volatility of those returns. Tracking Error measures the difference between the return fluctuations of a portfolio and the benchmark. 4. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance (this does not include the effects of sales charges, loads, and redemption fees). The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. 5. The FTSE Global Core Infrastructure 50/50 Index (Net) is generally representative of the market sectors or types of investments in which the Fund invests.

Consider the Funds' investment objectives, risks, charges, and expenses carefully before investing. The prospectus and summary prospectus include this and other information about the Funds and are available by visiting the [Prospectus](#). Read the prospectus carefully before investing.
