

NYLI WMC Growth Fund[†]

Formerly MainStay WMC Growth Fund

A: KLGAX | C: KLGCX | I: KLGIX | R6: KLGDX

All data as of 06/30/25

A fundamental, research-driven approach to large cap growth investing

Seeks: Long-term growth of capital.

Morningstar Category: Large Growth

Benchmark: Russell 1000 Growth Index⁴

A focus on sustainable growth

Seeks to generate consistent, long-term returns above the benchmark by investing in high-quality, large cap, sustainable growth companies.

Wellington's boutique approach

Investment team has autonomy to set the portfolio's philosophy and process, while leveraging the resources of a large, global firm.

Compelling growth companies

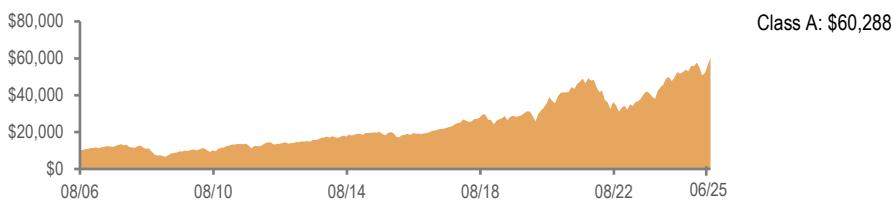

The fund consists of 60-80 securities with competitive barriers to entry and compelling business models, identified through a bottom-up approach.

Net (After Waivers/Reimbursements)	1.03	2.08	0.75	0.72					

Returns represent past performance which is no guarantee of future results. Current performance may be lower or higher. Investment return and principal value will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Performance reflects a contractual fee waiver and/or expense limitation agreement without which total returns may have been lower. This agreement will remain in effect until 2/28/26, and renew automatically for one-year terms unless written notice is provided prior to the start of the next term or upon approval of the Board. No initial sales charge applies on investments of \$1 million or more (and certain other qualified purchases). However, a contingent deferred sales charge of 1.00% may be imposed on certain redemptions made within 18 months of the date of purchase on shares that were purchased without an initial sales charge. Visit newyorklifeinvestments.com for the most recent month-end performance. Expenses stated are as of the fund's most recent prospectus.

[†]Effective 8/28/24, MainStay WMC Growth Fund was renamed NYLI WMC Growth Fund.

Before You Invest

Before considering an investment in the Fund, you should understand that you could lose money.

The investment strategies, practices and risk analyses used by the Subadvisor may not produce the desired results. Growth-oriented common stocks and other equity type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. These risks may be greater for emerging markets. The Fund may experience a portfolio turnover rate of over 100% and may generate short-term capital gains which are taxable.

1. Average annual total returns include the change in share price and reinvestment of dividends and capital gain distributions. Effective close of business 1/11/13, Keystone Large Cap Growth Fund was reorganized with and into MainStay Cornerstone Growth Fund. Performance figures for Class A and Class I shares reflect the historical performance of the then-existing Class A and Class I shares of Keystone Large Cap Growth Fund (which was subject to a different fee structure) for periods prior to 1/11/13. Class I shares are generally only available to corporate and institutional investors. Class R shares are available only through corporate-sponsored retirement plans. 2. The Russell 1000® Growth Index measures the performance of the large-cap growth segment of the U.S. equity universe. It includes those Russell 1000® Index companies with higher price-to-book ratios and higher forecasted growth values. Index results assume the reinvestment of all capital gain and dividend distributions. An investment cannot be made directly into an index. 3. Standard deviation measures how widely dispersed a fund's returns have been over a specified period of time. A high standard deviation indicates that the range is wide, implying greater potential for volatility. Alpha measures a fund's risk-adjusted performance and is expressed as an annualized percentage. Beta is a measure of historical volatility relative to an appropriate index (benchmark) based on its investment objective. A beta greater than 1.00 indicates volatility greater than the benchmark's. R-Squared measures the percentage of a fund's movements that result from movements in the index. The Sharpe Ratio shown is calculated for the past 36-month period by dividing annualized excess returns by annualized standard deviation. The Annual Turnover Rate measures how quickly securities in the Fund are either bought or sold during the 12 months as of the most recent annual shareholder report. 4. The Russell 1000® Growth Index is generally representative of the market sectors or types of investments in which the Fund invests.

Consider the Funds' investment objectives, risks, charges, and expenses carefully before investing. The prospectus and summary prospectus include this and other information about the Funds and are available by visiting the [Prospectus](#). Read the prospectus carefully before investing.
